## ABOUT THE PROJECT

SecureFuture – CyberSecurity for VET and SMEs – is an Erasmus+ project implemented between December 2022 and December 2024. The project is being conducted by a consortium of six partners from five countries, all partners with relevant expertise in vocational education and training (VET) and cybersecurity.

COUNTRY	ORGANISATION
<b>Türkiye</b>	Istanbul Ticaret Universitesi (coordinator)
<b>Türkiye</b>	İstanbul Valiligi
<b>Portugal</b>	Mindshift Talent Advisory
<b>Spain</b>	Media Creativa 2020
<b>Italy</b>	Pragma Engineering
<b>Austria</b>	Meta4 Innovations

The SecureFuture consortium identified that the current training provided at VET schools in the European Union (EU) does not live up to the needs of labour market or that there are countries without training on cybersecurity at this level. Besides, many short and medium-sized enterprises (SMEs) do not have qualified employees among their staff to protect their companies against cyber threats, and finding external assistance on cybersecurity is very costly.

Considering these aspects, the project is developing a European framework, curriculum and training content on cybersecurity to guide VET systems and SMEs who want to equip their students and employees with cybersecurity competences. This document refers to the European Cyber Security Curriculum.

---

## SYNOPSIS

The proposed European Cyber Security Curriculum is the final output of the project's work package 3: WP3 – European Cyber Security Curriculum.

The WP3 leader – Meta4 Innovations e. U. – prepared a **work plan**, guidelines and templates for all partners to facilitate the design and development of a proposed European Cyber Security Curriculum. As an interconnected development process, this European Cyber Security Curriculum is shaped by the Framework through a comparison of current national competencies on cyber security, which was collectively developed by all partners.

A survey across Europe was carried out in all partner countries – Austria, Italy, Portugal, Spain and Turkey – during the month of July 2023, in which a pool of 66 experts provided their inputs, to provide an overview of the respective national needs regarding the curriculum for the project. These inputs were summarised by Meta4 and shared with the partners to concur with the Learning Units of this European Cyber Security Curriculum.

# 1. CURRICULUM

## OVERVIEW

Considering the heterogeneous use of ECVET in partner countries, the average ECVET points per hour of training, the partnership of SecureFuture project agreed as follows:

20 hours of training = 1 ECVET point

The European Cyber Security Curriculum contains 10 modules with a span of 120 hours, which corresponds to 6 ECVET points.

<b>KA220-VET-C9588303</b> CYBERSECURITY FOR VET AND SMES	4

**1.**

**2. Unit 1: Introduction to Cybersecurity Defense**

**Introduction**

The 'Introduction to Cybersecurity Defense' module is a foundational exploration of cybersecurity for SMEs. It provides a comprehensive understanding of core concepts and principles crucial for safeguarding digital systems and data in the face of ever-changing threats. This module equips learners with the essential knowledge and skills needed to defend against cybersecurity threats and protect critical information assets in today's dynamic landscape.

**Objective**

The objective is to equip trainees with a solid understanding of core cybersecurity concepts and principles to effectively identify, mitigate, and respond to cyber threats.

**LEARNING OUTCOMES**

<b>Kn o w l e d g e</b>	<p>K1. Understand the basic principles of cybersecurity and data protection.</p> <p>K2. Identify common cyber threats and vulnerabilities.</p> <p>K3. Comprehend the legal and ethical aspects of cybersecurity.</p>	<b>Sk i l l s</b>	<p>S1. Demonstrate the ability to analyze network traffic for suspicious activities.</p> <p>S2. Ability to configure firewalls against threats and vulnerabilities.</p> <p>S3. Proficiency in conducting security tests and assessments.</p>	<b>Re s p o n s i b i l i t y a n d A u t o n o m y</b>	<p>RA1. Assess and prioritize security risks to develop a tailored action plan for cybersecurity.</p> <p>RA2. Respond effectively to common cyber threats such as malware or phishing.</p> <p>RA3. Collaborate procedures to minimize the impact of security incidents.</p>
---	--	-----------------------------------	--	---	---

**Duration**

Contact hours	Hands-on hours	Self-study hours	Assessment hours	TOTAL
0,5	2	9	0,5	12

**3. Unit 2: Data Protection and Privacy**

**Introduction**

This module equips learners with essential competencies for data safeguarding in the digital age. It covers key aspects of data protection, including data classification, responsible handling of sensitive information, privacy, intellectual property, and the complexities of cyber warfare. GDPR and other data protection regulations are emphasized, along with effective data encryption, secure storage practices, and incident response for data breaches. The module fosters attitudes that prioritize privacy, ethics, and adaptability in cybersecurity, enabling learners to actively contribute to digital defense and become vigilant data and privacy protectors.

**Objective**

To empower learners with the knowledge, skills, and attitudes necessary to effectively protect and manage data, ensuring compliance with data protection regulations and safeguarding privacy in cybersecurity.

**LEARNING OUTCOMES**

Knowledge		Skills		Responsibility and Autonomy	
	K1. Define data related concepts, including sensitive information, intellectual property and cyber warfare  K2. Differentiate data protection regulations related to personal data, digital data, and the General Data Protection Regulation (GDPR)  K3. Explain the importance of fostering a mindset that prioritises responsible data handling		S1. Relate adequate encryption techniques to different types of data  S2. Apply secure data storage best practices, including encryption, access controls, and regular backups  S3. Create data breach management plans considering the severity of breaches		RA1. Raise awareness towards safeguarding data and respecting individual privacy rights  RA2. Adopt an ethical approach to data handling and intellectual property  RA3. Develop a resilient and adaptive attitude towards the ever-evolving cybersecurity threats and regulations

## 5. Unit 3: Risk Management and Compliance

### Introduction

This module imparts essential competencies for managing cybersecurity risks and ensuring compliance. It integrates cyber risk management into enterprise-wide risk management practices, acknowledging that complete risk elimination is unattainable. Instead, it focuses on reducing threat impacts through effective cyber risk management programs. The module introduces learners to internationally recognized standards, particularly Information Security Management System (ISMS), outlining key steps and checklists for compliance. In addition to knowledge and skills, the module underscores the development of attitudes related to **apply ISMS compliance schemes and recommendations** in risk analysis, recognition, and mitigation, empowering learners to proactively address and manage cybersecurity threats **fostering a systemic approach to information security**.

### Objective

To empower learners with the knowledge, skills, and attitudes necessary to effectively apply risk management methodologies also referred to international compliance rules for cybersecurity.

## LEARNING OUTCOMES

<b>KA220-VET-C9588303</b> CYBERSECURITY FOR VET AND SMES	7
--	---

## EUROPEAN CYBER SECURITY CURRICULUM

<b>Kn o w l e d g e</b>	<p>K1. Define components and requirements of Information Security Management System</p> <p>K2. Identify Information Risk Management as function of Information Security Management System</p> <p>K3. Describe approach to Cybersecurity compliance rules</p>	<b>Sk i l l s</b>	<p>S1. Identify main components of Information Security Management System</p> <p>S2. Design Risk Management schemes applied to SMEs</p> <p>S3. Examine Cybersecurity compliance rules requirements</p>	<b>Re s p o n s i b i l i t y a n d A u t o n o m y</b>	<p>RA 1. Collaborate in defining Information Security Management System of SMEs</p> <p>RA2. Comply with the Risk Management process</p> <p>RA3. Deal with the adoption of Cybersecurity compliance rules</p>
---	--	-----------------------------------	--	---	--

### Duration

Contact hours	Hands-on hours	Self-study hours	Assessment hours	TOTAL
0,5	2	9	0,5	12

## 6. Unit 4: Social Engineering and Phishing Awareness

### Introduction

This learning unit focuses on social engineering and phishing awareness, vital in our digitally connected world. These topics are as critical as the transformative impact of cloud systems on businesses. By the unit's end, learners will define social engineering, comprehend its motivations (like financial gain and data theft), and recognize various phishing techniques and attack vectors used by cybercriminals. This enhances their threat detection and response capabilities. Learners will also grasp the legal and ethical implications of social engineering attacks, promoting responsible cybersecurity practices. The unit **instils** ethical awareness, fosters collaboration in incident response, and emphasizes legal compliance. It empowers IT professionals, business owners, VET students, or anyone interested in bolstering cybersecurity knowledge for a secure digital future with confidence and integrity.

### Objective

This learning unit aims to equip participants with the knowledge, skills, and ethical attitudes to define social engineering, identify phishing techniques, and understand their legal and ethical implications effectively.

## LEARNING OUTCOMES

KA220-VET-C9588303	CYBERSECURITY FOR VET AND SMES	8
--------------------	--------------------------------	---

## EUROPEAN CYBER SECURITY CURRICULUM

<b>Kn o w l e d g e</b>	<p>K1. Define Social Engineering and Its Motivations in the context of SMEs.</p> <p>K2. Identify Phishing Techniques and Attack Vectors that make SMEs vulnerable.</p> <p>K3. Recall the Legal and Ethical Implications of Social Engineering in the context of SMEs.</p>	<b>Sk i l l s</b>	<p>S1. Describe the primary motivations driving social engineering attacks.</p> <p>S2. Recognize methods such as spear phishing, vishing (voice phishing), and pretexting.</p> <p>S3. Understand the potential consequences for both perpetrators and victims.</p>	<b>Re s p o n s i b i l i t y a n d A u t o n o m y</b>	<p>RA1. Promote ethical awareness when defining social engineering motives for responsible, principled use of knowledge.</p> <p>RA2. Collaborate with teams to mitigate phishing threats when identifying attack techniques and vectors.</p> <p>RA3. Independently comply with laws, ensuring legality in social engineering actions and practices.</p>
---	---	-----------------------------------	--	---	---

### Duration

Contact hours	Hands-on hours	Self-study hours	Assessment hours	TOTAL
0,5	2	9	0,5	12

## 7. Unit 5: Cloud Security for SMEs

### Introduction

This unit focuses on addressing the unique security challenges that cloud systems present for SMEs, which increasingly rely on these systems for flexibility, scalability, and cost-efficiency. It is designed to provide SMEs with the knowledge and skills necessary to effectively manage cloud security. The unit is tailored to the specific needs and constraints of SMEs, offering practical insights and actionable strategies to mitigate risks, protect sensitive information, and ensure compliance with industry regulations. Learners will explore core principles of cloud security, cutting-edge technologies, and gain hands-on experience in implementing security measures. Whether a business owner, IT professional, VET student, or someone looking to enhance their cloud security knowledge, this curriculum equips learners with the tools needed to secure their SME's digital future effectively.

### Objective

This unit aims to allow learners to have insight into the advantages, possible risks and instructions to maximize the impact of using cloud systems for a SME.

KA220-VET-C9588303	CYBERSECURITY FOR VET AND SMES	9
--------------------	--------------------------------	---

LEARNING OUTCOMES

<b>Kn o w l e d g e</b>	<p>K1. Identify benefits of using cloud systems for a SME</p> <p>K2. Describe and mitigate the possible risks of using cloud systems.</p> <p>K3. Outlines the preventative steps that might be considered for SMEs' cloud computing security.</p>	<b>Sk i l l s</b>	<p>S1. Analyse on which aspect and how Cloud computing can be used by SMEs</p> <p>S2. Present security-related queries in a risk management context and propose solutions.</p> <p>S3. Illustrate different types of legal requirements which could have an impact on using cloud systems</p>	<b>Re s p o n s i b i l i t y a n d A u t o n o m y</b>	<p>RA1. Ensure a cloud security in compliance with EU personal data and national protection legislation</p> <p>RA2. Collaborate with colleagues to provide an example scenario on having a Cloud system</p> <p>RA3. Lead a team for assessing security opportunities in a procurement</p>
---	---	-----------------------------------	--	---	---

Duration

Contact hours	Hands-on hours	Self-study hours	Assessment hours	TOTAL
0,5	2	9	0,5	12

**8. Unit 6: Network Security Fundamentals**

Introduction

Network security is a crucial concern for SMEs looking to defend against cyber threats. It involves a holistic approach, incorporating physical and software-based safeguards, requiring organization-wide understanding. Learners will gain in-depth knowledge of precautions, encompassing conceptual comprehension and interpersonal skills. They'll learn about available measures for SMEs to manage network security, including forming dedicated teams capable of executing protective actions. This unit empowers participants with the expertise to navigate the intricate field of network security, ensuring they can protect their companies and operations from the evolving landscape of cyber threats effectively.

Objective

KA220-VET-C9588303	CYBERSECURITY FOR VET AND SMES	10
--------------------	--------------------------------	----

## EUROPEAN CYBER SECURITY CURRICULUM

This unit aims to provide learners a foundational understanding of network security for SMEs and how to guide their business towards SMEs security.

### LEARNING OUTCOMES

<b>Kn o w l e d g e</b>		<b>Sk i l l s</b>		<b>Re s p o n s i b i l i t y a n d A u t o n o m y</b>	
	K1. Explains the basics terms and concepts of network security  K2. Recalls the basic topologies and strategies used in network communication  K3. Identifies physical network connection elements and physical security procedures		S1. Discusses why network security is important for an SME  S2. Illustrate possible risks and possible solutions in network security  S3. Outlines potential network threats and how a SME should react and prevent them.		RA1. Lead a constituted team for network security  RA2. Provide recommendations on how a company can integrate network security into its business plan  RA3. Verify and monitor the implementation of network security procedures

### Duration

Contact hours	Hands-on hours	Self-study hours	Assessment hours	TOTAL
0,5	2	9	0,5	12

## 9. Unit 7: Secure Software Development

### Introduction

Secure software development is paramount in the face of increasing cyber threats. It necessitates embedding security practices across the entire software development cycle, from design and coding to testing, deployment, and maintenance. Its objective is safeguarding data, preserving user privacy, and ensuring software system integrity and availability. Key principles encompass defense in depth with multiple security layers, least privilege for minimal access, and secure-by-design from the project's inception. Regular testing, including penetration testing and code reviews, is essential. Secure deployment, maintenance, and incident response are crucial for ongoing security. Training and awareness, along with supportive resources, further enhance organizational security. Secure software development is indispensable in today's threat landscape, mitigating risks and preserving user trust.

## EUROPEAN CYBER SECURITY CURRICULUM

### Objective

Learn to implement secure software development practices, safeguarding systems, sensitive data, and user privacy, while minimizing breach and cyber attack risks, and ensuring maintenance, testing, and training.

### LEARNING OUTCOMES

Knowledge	Skills	Responsibility and Autonomy
<p>K1. Define secure coding practices, common security threats and security standards and frameworks</p> <p>K2. Learn secure development lifecycle and configuration management, secure deployment and maintenance</p> <p>K3. Determine Vulnerability assessment and penetration testing, encryption and cryptography, secure APIs and integrations</p>	<p>S1. Experiment secure coding, vulnerability assessment, security testing, encryption and cryptography</p> <p>S2. Construct secure configuration management, deployment and maintenance, secure API design</p> <p>S3. Improve compliance and privacy regulations, continuous learning</p>	<p>RA1. Take notice developers have a responsibility to prioritize security in their coding practices.</p> <p>RA2. Takes decisions on security-related issues during the software development process.</p> <p>RA3. Collaborate with security experts during the development process to ensure that security requirements are properly met.</p>

### Duration

Contact hours	Hands-on hours	Self-study hours	Assessment hours	TOTAL
0,5	2	9	0,5	12

## 10. Unit 8: Secure Endpoint Protection

### Introduction

In today's interconnected world, protecting endpoints, including laptops, desktops, mobile devices, and servers, from cyberattacks is essential. Secure endpoint protection entails implementing a multi-layered defense strategy to shield these devices from malware, ransomware, phishing, and unauthorized access. This involves deploying robust antivirus and anti-malware software, leveraging advanced threat detection and prevention mechanisms, enforcing

<b>KA220-VET-C9588303</b> CYBERSECURITY FOR VET AND SMES	12
--	----

## EUROPEAN CYBER SECURITY CURRICULUM

stringent access controls and authentication measures, and regularly updating software and operating systems. Secure endpoint protection is critical for organizations of all sizes and industries, as it averts data breaches, prevents unauthorized access to sensitive information, and safeguards business continuity. By fortifying endpoints, organizations can reduce the risk of cyberattacks, adhere to industry regulations, and protect their reputation and customer trust.

### Objective

Learn to secure laptops, desktops, mobile devices, and servers against malware, ransomware, phishing, and unauthorized access, reducing data breaches and operational disruptions while ensuring compliance and preserving trust.

### LEARNING OUTCOMES

Knowledge	Skills	Responsibility and Autonomy
<p>K1. Understand endpoint security and an overview of secure endpoint protection Measures</p> <p>K2. Defines Key components of secure endpoint protection, Antivirus, Firewall, and Encryption</p> <p>K3. Determine best practices for Implementing secure endpoint protection, patch management, threat detection, and user training</p>	<p>S1. Able to analyze and respond to malware, ransomware, and phishing threats for effective mitigation.</p> <p>S2. Manage and configure endpoint security tools (antivirus, firewalls, encryption) for effective deployment and operation.</p> <p>S3. Capable to patch management, access controls, data encryption, user awareness for endpoint security.</p>	<p>RA 1. Secure endpoints with antivirus, firewalls, encryption to counter threats and vulnerabilities effectively.</p> <p>RA2. Assume endpoint security responsibility, identifying, mitigating risks, conducting assessments, and maintaining security.</p> <p>RA3. Swiftly respond to security incidents, investigate, conduct forensics, implement remediation, prevent recurrences.</p>

### Duration

Contact hours	Hands-on hours	Self-study hours	Assessment hours	TOTAL
0,5	2	9	0,5	12

## 11. Unit 9: Incident Management and Response

### Introduction

Incident Management and Response is essential for mitigating a broad range of disruptions and threats. Its purpose is to efficiently identify, analyze, and respond to incidents that can disrupt operations or harm an organization's assets, reputation, and stakeholders. These incidents encompass cyberattacks, data breaches, natural disasters, accidents, and public health emergencies. The main goal is to minimize impact, restore operations, and prevent future incidents, following a structured framework. Successful incident management also demands clear communication and collaboration among teams and stakeholders. A robust strategy enables organizations to proactively address risks, enhance resilience, reduce downtime, protect data, comply with regulations, and safeguard their reputation.

### Objective

Learn to respond effectively to minimize incident impact, including prompt detection, resource mobilization, coordinated response, and rapid restoration of normal operations for overall stability and security.

### LEARNING OUTCOMES

Knowledge		Skills		Responsibility and Autonomy	
	K1. Make ready Incident Detection and Reporting, Incident Assessment and Analysis		S1. Analyze incidents, identify causes, and select appropriate response strategies using strong problem-solving skills.		RA 1. Prepared for promptly identifying and triaging incidents that occur within an organization.
	K2. Incident Response Planning and Preparedness, Incident Containment and Mitigation		S2. Communicate effectively for incident management and response.		RA2. Assume responsibility for coordinating and executing the response to incidents.
	K3. To organise Incident Communication and Coordination, Incident Recovery and Lessons Learned.		S3. Apply technical knowledge for incident detection in effective incident management and response.		RA3. Take charge for documenting and reporting incidents

### Duration

Contact hours	Hands-on hours	Self-study hours	Assessment hours	TOTAL
---------------	----------------	------------------	------------------	-------

<b>KA220-VET-C9588303</b> CYBERSECURITY FOR VET AND SMES	14

## 12. Unit 10: Business Continuity and Disaster Recovery

### Introduction

Business Continuity and Disaster Recovery (BCDR) are integral to an organization's risk management strategy, ensuring the continuity of critical business operations and the recovery of systems and data in times of disruption. Business Continuity involves proactive planning, identifying vital processes, assessing risks, and developing strategies to maintain business operations during and after a disruption. Disaster Recovery focuses on technical aspects, involving backup and recovery plans, resilient IT systems, and procedures to restore normal operations quickly. Both BCDR elements demand a thorough understanding of an organization's assets, dependencies, and risks. Collaboration and coordination across departments, role clarity, communication, training, and testing are vital. Effective BCDR plans minimize disruption impact, maintain trust, and ensure long-term operational resilience.

### Objective

Learn to secure critical business operations, minimize disruption impact, identify risks, develop and test plans to enhance organizational resilience and to ensure long-term viability.

### LEARNING OUTCOMES

<b>Kn ow led ge</b>	<p>K1. Define risk Assessment and Business Impact Analysis, Business Continuity Planning</p> <p>K2. Identify to key elements of IT Disaster Recovery Planning and Crisis Management</p> <p>K3. Awareness about Backup and Recovery Strategies relevant for continuity of business operations.</p>	<b>Sk ill s</b>	<p>S1. Able to conduct risk assessments and analysis to identify potential threats and vulnerabilities to critical business operations.</p> <p>S2. Create comprehensive business continuity and disaster recovery plans.</p> <p>S3. List procedures, and resources needed to ensure the continuity of critical operations and the timely recovery of systems and data.</p>	<b>Re sp on si bil ity an d A ut on o m y</b>	<p>RA 1. Responsibility for identifying and assessing potential risks and vulnerabilities to critical business operations and IT systems.</p> <p>RA2. Prepared for implementing comprehensive business continuity and disaster recovery plans.</p> <p>RA3. Regularly monitor and test business continuity and disaster recovery plans to ensure their effectiveness</p>

## 2. FINAL REMARKS

The European Cyber Security Curriculum developed under the Erasmus+ project SecureFuture was precisely drafted with the inputs provided by the project partners following the national consultations with 66 professionals in the domain of Cybersecurity in their countries.

It takes into consideration the following parameters:

- A modular allocation of training content into ten areas as units of competence and related contents;
- A set of knowledge, skills, responsibility and autonomy compiled in a table for each of the ten learning units;
- Assignment of 6,0 ECVET points to the set of 10 units corresponding to 120 hours of training.

This Curriculum shall serve as the foundation for the development of the European Cyber Security Training Content, as defined in the WP4 – SecureFuture Training Content.

Together, the European Qualifications Framework, the Training Curriculum and Training Content are an innovative value proposition with strong potential to meet European countries' needs regarding training in cybersecurity for VET students and employees of SMEs – the main target groups of the project – and thus prepare well-trained cybersecurity professionals to defend European SMEs from cyber threats.
